Safe Operations

Policy

Safe Operations

We execute our operations under the highest health, safety and security standards to ensure a safe workplace, and prevent harm to people and assets. Our success depends on safe and reliable operations, combined with the well-being of our people.

We are committed to and accountable for Safe Operations, by exercising role model behaviour in all activities - utilizing our values to proactively embed safe operations in work execution.

We plan and execute our operations in a way that:

- Avoids harm and injuries to personnel, the environment and all assets
- Avoids work-related illness
- Ensures safe, reliable, compliant and cost-effective operations

I enable a safer AKER BP because:

- I live by our values
- I plan for safe work, recognize change and stop unsafe work
- I comply with our business management system
- I report all incidents and harmful conditions
- I continually improve HSSEQ and implement actions based on learnings
- I make decisions based on risk and facts

1.1 We operate safely in accordance with the Life-Saving Rules

The most important learning points for long-term business are summarized with (9) Life-Saving Rules that are used by operators and contractors. Life-Saving Rules are controls designed to prevent incidents when performing work and provides workers with a simple set of actions to protect themselves and others from hazards. The Life-Saving Rules are:

- Obtain authorisation before overriding or disabling safety controls
- Obtain authorisation before entering a confined space
- Follow safe driving rules
- Verify isolation and zero energy before work begins
- Control flammables and ignition sources
- Keep yourself and others out of the line of fire
- Plan lifting operations and control the area
- Work with a valid permit when required
- Protect yourself against a fall when working at height

For more information, please see [Life Saving Rules](#).

1.2 Design and plan for safe operations throughout the life cycle of our activities

We incorporate safe operations in the design of our facilities by understanding the risks and handling these via the hierarchy of controls. We minimize risk of major accidents at all levels within the company and prioritize and integrate safety in our goals, strategies and activity plans.

Communication and planning are key for safe operations throughout the life cycle of our activities.
